Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
void func(int n)
{   int c=0;
    c=c+1;
    if(n==1)
    {
      //printf("*");
      c=c+1;
    }
    else
    {
        //c=c+1;
     for(int i=1; i<=n; i++)
     {
         //c=c+1;
       for(int j=1; j<=n; j++)
       {
           c=c+1;
          //printf("*");
          //printf("*");
          c=c+2;
           c=c+1;
          break;
       }
       c=c+1;
     }
     c=c+1;
   }
```

```
29    printf("%d",c);
30  }
31  int main(){
32      int n;
33      scanf("%d",&n);
34      func(n);
35      return 0;
36  }
37
```

	Input	Expected	Got	
✔	2	12	12	✔
✔	1000	5002	5002	✔
✔	143	717	717	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
